

Assignment 2

Build the Menu and Booking Form

Anna's Kitchen Website Project

Project scenario

Development of the website is now underway. Anna's Kitchen has requested that its main menu be published and that customers are able to enter table-booking details through the website. You have been assigned responsibility for implementing both features.

Your task

Add a menu section and booking form beneath the existing Welcome content. Use the exact menu copy, dish data, form labels and option text supplied in this brief. This assignment focuses on HTML content and form controls; do not add visual CSS styling yet.

1. Add the menu content

- Add a level-two heading containing **Our Menu**.
- Add the menu introduction provided below.
Our menu features a selection of freshly prepared dishes made using quality ingredients and traditional recipes. Whether you're looking for a hearty main course or a comforting dessert, every meal is prepared with care and served in a warm, welcoming atmosphere.
- Create a table with three columns: **Item**, **Description** and **Price**.
- Use `th` elements for the three column headings.
- Add all ten menu entries exactly as specified below. Use the pound or dollar symbol and two decimal places for every price.

Item	Description	Price
Full English Breakfast	Bacon, sausages, eggs, baked beans, mushrooms, tomato and toast	£10.95
Cottage Pie	Minced beef with vegetables topped with creamy mashed potato	£12.50
Fish and Chips	Battered cod served with chips, mushy peas and tartare sauce	£13.95
Roast Chicken Dinner	Roast chicken served with seasonal vegetables, roast potatoes and gravy	£14.50
Steak and Ale Pie	Slow-cooked beef in a rich ale gravy with buttery pastry	£15.25
Vegetable Pie	Seasonal vegetables in a creamy herb sauce with flaky pastry	£11.50
Grilled Salmon	Fresh salmon fillet served with new potatoes and seasonal greens	£16.95
Beef Burger	Homemade beef burger with cheese, salad and chunky chips	£13.50
Apple Crumble	Warm baked apples with a golden crumble topping and custard	£6.25
Sticky Toffee Pudding	Rich sponge pudding with toffee sauce and vanilla ice cream	£6.95

2. Add the booking form

- Add a level-two heading containing **Book a Table**.
- Create a form using `action="#"` and `method="get"`.
- Create each control listed in the Booking form specification.
- Associate every visible label with its control using matching `for` and `id` values.
- Give every form control a meaningful `name` attribute.
- Mark the `name`, `email`, `booking date`, `booking time` and `number of guests` fields as required.
- Restrict the `number of guests` to values from 1 to 12.
- Use a `select` element for the seating preference: `window`, `main dining area`, `outdoor`, `no preference`
- Add a `textarea` for additional requests.
- Add a submit button containing the text `Request Booking`.

Expected result

The page should display the restaurant heading and introduction, followed by a complete menu table and booking form. The form should use appropriate browser controls and built-in validation, but the page will still use the browser's default presentation.

Assessment criteria

- ☐ The restaurant heading, introductory sentence, Welcome heading and all four Welcome paragraphs from Assignment 1 remain present.
- ☐ The menu table contains three correctly labelled columns and all ten menu entries.
- ☐ Every form label is associated with the correct form control.
- ☐ All controls have the specified `id` and `name` values.
- ☐ Required fields prevent an empty form submission.
- ☐ The email field uses browser email validation.
- ☐ The guest field accepts only values from 1 to 12.
- ☐ The seating menu contains all four options.
- ☐ The submit button is labelled `Request Booking`.
