

## Assignment 4

# Create the Visual Design

---

### *Anna's Kitchen Website Project*

## Project scenario

The structure and content of the Anna's Kitchen website are complete, but the page still relies on the browser's default presentation. The client has supplied an approved color palette and requested a consistent, welcoming visual design. Anna has also provided a sketch of how she would like the website to look.

## Your task

Implement the visual design shown in the UI Design Sketch to match as close as possible using CSS. Focus on color, typography, spacing, borders, form presentation and user interaction. Flexbox, Grid, multi-column layout and positioned captions will be added in Assignment 5.

### 1. Establish the page defaults

- Remove the default body margin.
- Apply #FFF8F0 as the page background color.
- Use Arial with a generic sans-serif fallback.
- Set the body line-height to 1.6.
- Apply #2F2525 as the default text color.

### 2. Constrain the main content

- Set main and footer to a maximum width of 1100px.
- Centre main and footer using automatic horizontal margins.

### 3. Style the header and navigation links

- Add 20px of space below the header.
- Use #8B1D2A for the header background.
- Add a 5px solid #FFD064 border beneath the header.
- Centre the header text and use #FFD064 for its text color.
- Remove the h1 margin and set its size to 2.5em.
- Add 5px of space above the introductory sentence.
- Remove the navigation list markers and default list padding.
- Make each navigation link a block-level clickable area with 10px vertical and 20px horizontal padding.
- Use gold text, bold weight and no underline for navigation links.
- On hover and visible keyboard focus, use a gold background and burgundy text.
- Add a clearly visible focus outline for keyboard users.

### 4. Style the content sections

- Add 20px of space below each section.
- Add 20px of internal padding.
- Use #FFF0E8 as the section background.
- Add a 2px solid #E5C07B border.

- Round the corners using a 10px border radius.
- Remove the top margin from each h2 and use a 28px font size.

## 5. Make media flexible

- Display images and video as block-level elements.
- Set their maximum width to 100%.
- Set height to auto so their proportions are preserved.
- Remove the figure element's default margin.

## 6. Style the menu table

- Set the table width to 100%.
- Collapse adjoining table borders.
- Add 10px of padding to th and td cells.
- Add a 1px solid #E5C07B border to each cell.
- Align cell text to the left.
- Use a burgundy background and cream text for the header cells.

## 7. Style the booking form

- Control the spacing below each form paragraph.
- Display labels as blocks and make them bold.
- Make input, select, textarea and button elements inherit the page font.
- Give input, select and textarea controls a consistent width, padding, border and rounded corners.
- Use a visible gold outline when a form control receives focus.
- Style the submit button with a burgundy background, cream text, rounded corners and bold text.
- Use #65151F when the button is hovered or receives visible keyboard focus.

## 8. Style the footer

- Centre the footer text.
- Add 5px of padding above and 20px below.

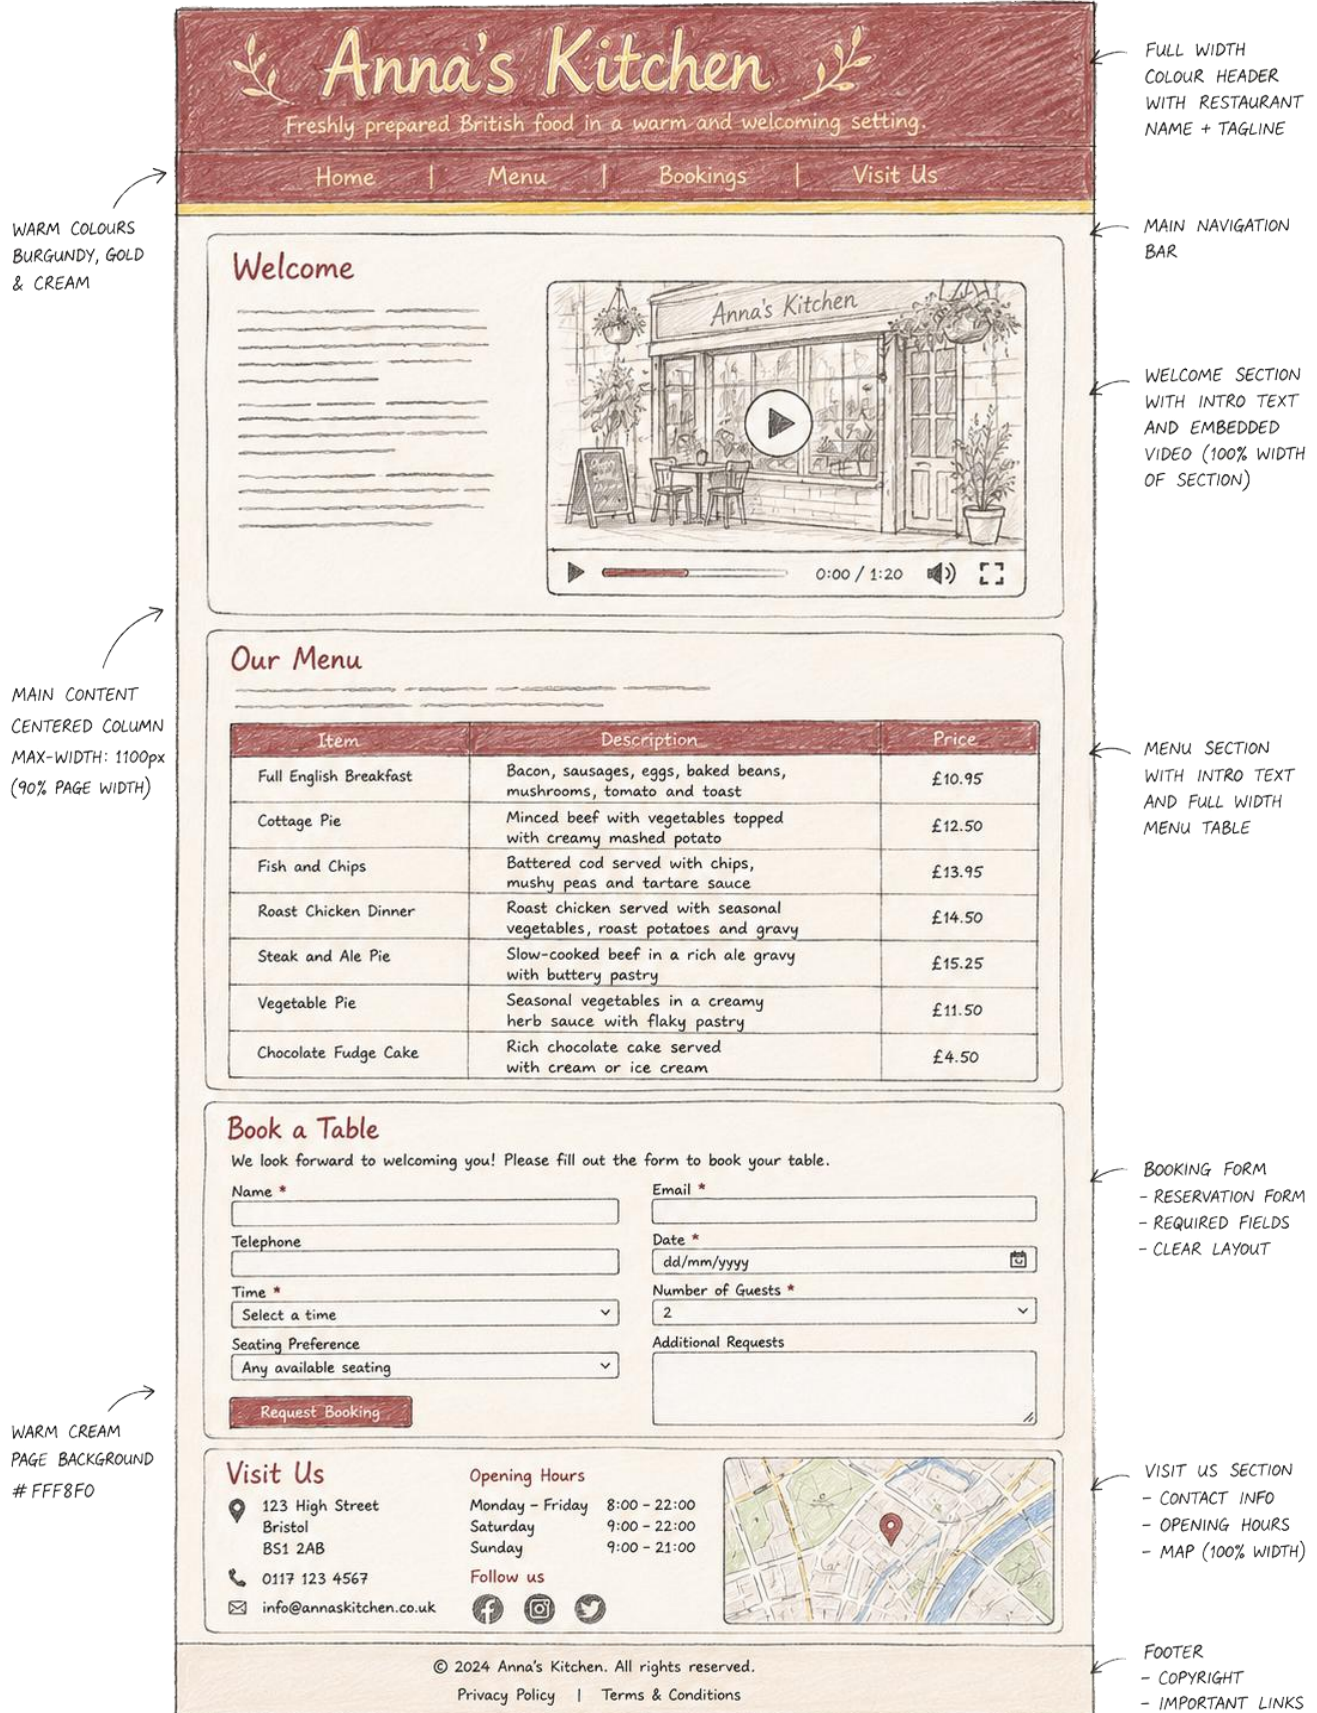

## Expected result

The page should use the approved restaurant color palette and present its headings, navigation links, panels, media, table, form and footer consistently. The content should still flow vertically because the final page layout has not yet been introduced.

## Assessment criteria

- ☐ styles.css is linked and all visual styling is stored in the external stylesheet.
- ☐ The page uses the approved colors consistently.
- ☐ The header, sections, table, form controls and button have the specified presentation.
- ☐ Text remains readable against every background color.
- ☐ Images and video do not overflow their containing sections.
- ☐ Mouse hover states are visible.
- ☐ Keyboard focus indicators are visible on links, controls and the button.
- ☐ No Grid layout, positioned caption or responsive media query has been added prematurely.

# UI Design Sketch

## Approved Color Palette

| Purpose                | Sample                                                                            | color           | Hex Value |
|------------------------|-----------------------------------------------------------------------------------|-----------------|-----------|
| Page background        |  | Cream           | #FFF8F0   |
| Section background     |  | Light cream     | #FFF0E8   |
| Primary brand color    |  | Burgundy        | #8B1D2A   |
| Button hover color     |  | Dark burgundy   | #65151F   |
| Accent and focus color |  | Gold            | #FFD064   |
| Borders                |  | Muted gold      | #E5C07B   |
| Primary text           |  | Dark brown      | #2F2525   |
| Secondary text         |  | Muted brown     | #6B5A5A   |
| Form borders           |  | Warm grey-brown | #9F8B7A   |
