

Assignment 5

Build the Page Layout

Anna's Kitchen Website Project

Project scenario

The Anna's Kitchen website now has a consistent visual design, but its content still follows a simple vertical flow. The client has requested a clearer desktop layout that makes better use of the available screen space.

Your task

Use Flexbox for the navigation, Grid for the menu and booking content, and CSS positioning for the figure caption. This assignment creates the desktop layout. Responsive adaptation will be completed in Assignment 6.

1. Lay out the navigation with Flexbox

- Set the navigation list to display: flex.
- Allow navigation items to wrap when there is insufficient space.
- Centre the items along the main axis.
- Keep the existing list reset and link styling from Assignment 4.

2. Group the menu and booking sections

- In index.html, place the Menu and Bookings section elements inside one generic div container.
- Give the container the class content-grid.
- Do not place the Welcome, Visit or Find Us sections inside this container.
- Keep the section elements and their ids unchanged.

3. Create the Grid layout

- Set .content-grid to display: grid.
- Create two columns using a 2fr 1fr proportion.
- Place a 20px gap between the columns.
- The wider first column must contain the menu and the narrower second column must contain the booking form.

4. Position the image caption

- Establish the figure as the positioning container using position: relative.
- Position the figcaption absolutely within the figure.
- Place it 10px from the right and 10px from the bottom.
- Add 5px vertical and 10px horizontal padding.
- Use a mostly opaque cream background so the caption remains readable over the image.
- Round the caption corners using a 5px border radius.
- Use a 14px font size.

Expected result

On a desktop-sized browser window, the menu and booking form should appear side by side, the navigation links should form a centred flexible row, and the dining-room caption should overlay the lower-right corner of the restaurant image without affecting surrounding content.

Assessment criteria

- ☐ The navigation list uses Flexbox and can wrap.
- ☐ Only the Menu and Bookings sections are wrapped by .content-grid.
- ☐ .content-grid uses two columns in a 2fr 1fr proportion.
- ☐ A consistent 20px gap separates the two columns.
- ☐ The menu appears in the wider left column and the form in the narrower right column.
- ☐ The caption is positioned relative to its own figure.
- ☐ The caption remains legible over the image.
- ☐ No main content overlaps or is removed from normal flow.
- ☐ The visual design from Assignment 4 remains intact.
