

Assignment 7

Online Ordering Prototype

Anna's Kitchen Website Project

Project scenario

Anna's Kitchen now has a responsive informational website, but customers still need to order food online. The client has asked for a browser-based ordering prototype that presents a short menu, calculates collection or delivery totals, validates checkout, and displays a personal confirmation. The prototype must extend the existing Anna's Kitchen visual identity and remain usable on narrow and wide screens.

Your task

The HTML structure and CSS styling for the order page have already been provided in the starter files. Your task is to complete the JavaScript in order.js to make the ordering system interactive.

You will use JavaScript to display the menu, allow customers to add items to their order, calculate the order total, handle collection and delivery options, validate the checkout process, and display an order confirmation.

Anna's Kitchen
Freshly prepared British food in a warm and welcoming setting.

Home Menu Bookings Visit Us

Our Menu

Browse the menu and add items to your order.

- Fish and Chips**
Battered cod served with chips, mushy peas and tartare sauce.
£13.95 [Add to Order](#)
- Steak and Ale Pie**
Slow-cooked beef in a rich ale gravy with buttery pastry.
£15.25 [Add to Order](#)
- Vegetable Pie**
Seasonal vegetables in a creamy herb sauce with flaky pastry.
£11.50 [Add to Order](#)
- Apple Crumble**
Warm baked apples with a golden crumble topping and custard.
£6.25 [Add to Order](#)

Your Order

Your order is currently empty.

Subtotal: £0.00
Delivery: £0.00

Total: £0.00

Delivery costs £2.50. Delivery is free when the subtotal reaches £25.00.

COLOUR PALETTE

- Burgundy #8B1D2A
- Gold #FFD064
- Light Cream #FFF0E8
- Cream #FFF8F0
- Dark Text #2F2525

NOTES

- Rounded panels
- Soft borders
- Generous spacing
- Clear hierarchy

1. Open the order.js starter file.
2. Complete the formatCurrency() function so that prices are displayed in pounds with two decimal places.
3. Complete the calculateSubtotal() function to add together the prices of all items currently in the order.
4. Complete the calculateDelivery() function so that:
 - Collection has no delivery charge.
 - Delivery costs £2.50.
 - Delivery is free when the subtotal reaches £25.00.
 - No delivery charge is shown when the order is empty.
5. Complete the calculateTotal() function to add the subtotal and delivery charge together.
6. Complete the displayOrder() function so that the selected items are displayed in the **Your Order** section.
7. Update the subtotal, delivery charge and total shown on the webpage.
8. Complete the code inside the **Add to Order** button event listener so that the selected menu item is added to the orderItems array.
9. Complete the updateOrderType() function so that changing between **Collection** and **Delivery** recalculates the order totals.
10. Complete the placeOrder() function so that the checkout form is handled when it is submitted.
11. Check that at least one item has been added before allowing the order to be completed.
12. Read the customer's name from the checkout form.
13. Display a personalised confirmation showing the customer's name, whether the order is for collection or delivery, and the final order total.
14. Clear the order and reset the checkout form after a successful order.
15. Add a change event listener to the order type control and a submit event listener to the checkout form.
16. Call displayMenu() and displayOrder() when the page first loads.
17. Test the completed ordering system by adding different menu items, changing between collection and delivery, checking the calculated totals, and placing an order.
